

# ASSIGNMENT

## Schema-Driven Dynamic Form Builder

### Objective

Build a **schema-first form engine** capable of rendering complex workflows with async data and accessibility parity.

---

### Mandatory Tech Stack

As per Global Constraints.

---

### Scope

- Nested schemas and repeaters
  - Conditional logic
  - Async options
  - Validation pipelines
  - Autosave and resume
  - Keyboard and screen reader support
- 

### Explicitly Forbidden

- Form libraries (Formik, React Hook Form, etc.)
  - Schema renderers
- 

### Tasks

1. Define schema format and validator.
2. Implement renderer for core field types.
3. Add conditional logic and dependency resolution.
4. Implement sync + async validation.
5. Add autosave with conflict handling.
6. Build Storybook scenarios.

---

## **Strict Requirements**

- Deterministic logic
- No hidden required fields
- Keyboard completion of all flows
- Public Storybook required

---

## **Deliverables**

- Form builder component
- Schema documentation
- Tests and accessibility report
- Public Storybook link
