

ADMIN DASHBOARD

Existing Features & New Features

Tanishka Soni (Group D)

Existing Admin Features

- **Dashboard Analytics** – Displays key metrics such as total vendors, submitted forms, and form groups.
- **Customer Response Management** – Allows admins to view, expand, and manage customer submissions, personal details, answers, and uploaded documents.
- **Vendor Workflow Management** – Assigns vendors in a sequential approval process and tracks workflow status (pending, approved, rejected, waiting).
- **Deadline & Timer Tracking** – Shows real-time countdowns for active vendor review deadlines.
- **Form Group & Category Management** – Organizes forms using nested folders, categories, and subcategories.
- **Dynamic Form Creation** – Enables admins to create customizable forms with dynamic input fields and document upload support.
- **Vendor Profile Management** – Supports complete vendor CRUD operations, including professional, identity, address, and bank details.
- **Form & Submission Control** – Allows creation, management, and deletion of forms and customer responses.
- **Automated Workflow Processing** – Automatically moves submissions to the next vendor after approval or expiry of the current review stage.
- **PDF Document Generation** – Generates professional documents and templates in PDF format.
- **Payment Integration** – Processes customer payments securely through Razorpay.
- **Centralized Admin Dashboard** – Provides a single interface to monitor forms, vendors, customers, workflows, and overall platform activity.

Current Problem	Proposed Feature / Solution
The system currently allows assignment of only up to 2 vendors in a workflow. This limits flexibility for complex approval processes.	Dynamic Workflow Builder – Allow unlimited vendor chains with drag-and-drop sequencing so administrators can create custom multi-level approval workflows.
Payment information exists in the database but there is no dedicated admin interface to monitor transactions.	Payment History & Transaction Dashboard – Create a dedicated payment management page displaying order IDs, payment status, amount, transaction date, and search/filter options.
If an assigned vendor is unavailable or does not respond, the workflow gets delayed and administrators cannot intervene.	Manual Workflow Override & Reassignment – Allow admins to skip the current vendor or reassign the review task to another vendor without restarting the process.
The customer response table lacks advanced search, filtering, and pagination. Managing large datasets becomes difficult.	Search, Filtering & Pagination – Add filters by customer name, mobile number, form type, status, and date range, along with paginated results.
Administrators cannot export response or payment data for reporting and record keeping.	Data Export Utility – Add Export to CSV/Excel functionality for customer responses, workflow reports, and payment records.
Dashboard analytics are limited to static numerical cards and do not provide visual insights.	Interactive Analytics & Reporting – Add charts for revenue trends, form submission statistics, vendor performance metrics, and workflow bottleneck analysis.
No centralized notification mechanism exists for important workflow events.	Admin Notification Center – Notify administrators about new submissions, payment confirmations, vendor approvals, rejections, and workflow expirations.

There is no audit trail for tracking administrative actions.	Audit Log System – Record actions such as form creation, vendor updates, workflow changes, and deletions for transparency and accountability.
Different administrative users cannot be assigned different permissions.	Role-Based Access Control (RBAC) – Introduce roles such as Super Admin, Manager, Support Executive, and Vendor Manager with controlled access rights.

Conclusion

The current Admin Dashboard provides a strong foundation for managing forms, vendors, customer submissions, workflows, and payments within the Service Form Automation Platform. It enables administrators to efficiently create dynamic forms, organize them into categories, monitor customer responses, assign vendors, and track review progress through a structured approval workflow.

To further enhance the platform, features such as Dynamic Workflow Builder, Payment History Dashboard, Manual Workflow Override, Advanced Search & Filtering, Data Export, and Interactive Analytics can be implemented. These improvements will increase operational efficiency, scalability, reporting capabilities, and administrative control, making the system more suitable for large-scale and enterprise-level workflow automation.
